

Bhargav

Software Engineer | Python · AWS · SQL · REST APIs

Andhra Pradesh, India | Open to Relocation & Remote | Immediate Joiner

Professional Summary

Recent B.Tech graduate in Internet of Things (IoT) with hands-on software engineering experience across Python, SQL, REST APIs, and AWS fundamentals. Built and debugged end-to-end systems independently, including an NLP-based chatbot and a deep learning image enhancement pipeline. Strong analytical thinking, fast learner, and comfortable owning a problem from design through debugging to delivery.

Technical Skills

- Languages: Python, SQL, HTML/CSS (coursework)
- Cloud: AWS fundamentals (EC2, S3, IAM basics)
- Tools: Git/GitHub, REST API integration, Postman
- Concepts: Data structures & algorithms, NLP basics, deep learning fundamentals, debugging & testing
- Core Strengths: Analytical problem-solving, written & verbal communication, ownership mindset

Projects

7CIT3BOT — AI Chatbot using NLP | Final Year Project

- Designed and built a conversational chatbot in Python covering intent recognition and response generation end-to-end.
- Iteratively tested and debugged the pipeline, resolving logic and integration issues through structured troubleshooting.

Underwater Image Enhancement using Deep Learning

- Built and evaluated a deep learning model in Python to enhance degraded underwater imagery.
- Handled data preprocessing, model performance analysis, and used SQL to organize experiment results.

Education

B.Tech, Internet of Things (IoT) — Presidency University, Bengaluru

2021 – 2025

What I Bring

- Solid foundation in Python, SQL, and cloud fundamentals, backed by real, independently-built projects.
- Proven ability to debug and problem-solve through complex, unfamiliar systems.
- Fast learner with a track record of picking up new tools and concepts through self-study.
- Reliable, detail-oriented, and comfortable working across shift-based, remote, or on-site team setups.
